All sciences progress in time. And management, as a part of economics, is not an exception too. Modern management - this is a specific direction in management in terms of production and performance management. The fulfillment of such a global task presupposes the expansion of the manager's sphere of responsibility, which is made up of all the factors that determine the organization's activities, its results: internal and external, under its control, and completely independent of it.

Modern management is its system of using and controlling money, resources and other goods. Management includes ten approaches: system, complex, integration, market, functional, dynamic, process, quantitative, reproductive and normative.
