To begin with, I want to admit that I was a very lazy and disorganized person. There was a time when I spent all day playing computer games, for long teas and parties with my friends. Parents swore at me because I didn't help around the house, didn't cook dinners and didn't study well at school.

When I finished school, I decided that it was time to start living correctly, not to waste time and build my business. I chose to do business for many reasons. Firstly, doing business you cannot be a lazy, disorganized and irresponsible person. Secondly, I can live in warm countries and do business in other countries. Thirdly, I don't want to live in a country where corruption flourishes, innocent people are beaten, where the authorities create lawlessness and imprison innocent people.

From day to day I keep a diary in which I write my goals for the day, month and years. I also began to wake up earlier in order to have time to do all the planned cases. Now I have time to devote time to my relatives, to work, to my friends and again to work hah.

On weekends I try not to do work because my head needs to be given rest. Therefore, I often spend weekends on a snowboard, walk in the woods, paint pictures and come to exhibitions in the museum.

In conclusion, I want to say that every person has the right to choose to spend their time in his way, but I advise you not to waste time in vain, self-realization, develop physically, mentally and spiritually. I also advise you to plan your day, because with the help of the plan you can be in time and achieve more than without it. Take care of your own and other peoples time!
