There is such an amazing and interesting profession as a programmer. In the age of information technology, this profession is in great demand, since it is necessary to program many devices and develop software. Becoming a skilled programmer is not easy. This profession requires logical thinking, a mathematical mindset, patience, attentiveness and thoughtfulness. In addition, the programmer cannot succeed without constant, most often independent, professional development and replenishment of professional knowledge, as well as literally daily training in writing code.

1. Get an education at an educational institution (college or university).
2. Self-education (various distance learning courses on the Internet).
