Hello everyone,

I've wanted to write something for the School website for ages, but I haven't managed to find the time until now. Life is so weird! Time is like water. Anyway, here is my news.

As most of you know, after living School 15 in the 9th grade I went to School 9. After that I went to Pedagogical University to study informatics. I studied for two years, and I was had to go to the main Pedagogical University in Irkutsk because the faculty in my town was closed. I stayed there for five years. It was difficult and full of fun as I taught living alone and with my roommates. They were so different, and I was friendly with each of them.

After finishing my studies, I got a Master's degree in Information and Communication Technology, and returned to my town. I was lucky enough to find a job as a teacher, but I wanted to spend more time for vacation. It is so hard to be a teacher! So hard and so interesting. I never knew that I like children, and I can work with them. I have been working at school for almost two years, and I deal with it. I think, I am at the right place.

That is all for now. Best wishes to everyone,

Darja
