Choosing a profession is a very difficult choice that remains for life. This choice should be taken seriously, because our whole life depends on it. When choosing a profession, you need to take into account: the demand for the profession in the labor market; the amount of wages; features of the profession; personal qualities of a person for mastering a particular profession.

From an early age, I dreamed of a successful career. I dreamed that every day I would go to work with great joy and pleasure.

My dream job.

"I'm in College , but I'm always thinking about my future profession. I like several different areas of work, but most of all I am attracted to the tourism industry. My dream job is working on a foreign cruise ship.

After I finish school I really want to try doing any kind of a job on a cruise ship whether it's an administrator, a steward, a bartender, a waiter, a tourist entertainer or a guard etc. I understand that these professions can't be considered as a lifetime career but only temporary work. It's necessary so I can understand if I like working on cruise ships or not and to get the experience I need. I would like to work for about a year and then I would study tourism management so I can come back to the ship as a manager not just a worker.

What do I like the most about this job? First of all, it will help me to travel and see different cities and countries and to know the world better. Because cruise ships travel all over the world and there are even routes to the Arctic Regions and Antarctica. Secondly, obviously it's the ability to communicate with people from all over the world. I will have to learn several languages and it's a very useful skill to have in life and I will know a lot about other nations. Thirdly, it's an opportunity to live and work in an international environment so you can make friends and connections in every corner of the world. And the last thing, it's a good salary that will help me to live securely.

Conclusion.

To achieve heights in the profession of your dreams, you need to work hard on yourself, constantly improve the level of knowledge and expand practical experience. but the most difficult step is to realize your purpose, to measure your desires with your own qualities of

character and mindset. and then the choice of specialty will never disappoint, and all difficulties will be solved with extraordinary energy and optimism.
