Space is beautiful, and it's hard to argue that space views are truly beautiful. Beauty does not disappear in our solar system, whenever it was not astronautics, we would not even be able to see how beautiful our planet is. Space is cognitive. Space is complex technologies. Space is significant people. Space does not tolerate people with weak mentality and whiners. There are no beauty standards for astronauts, but there are many other requirements that the average person does not meet. Space is a glorious history and a promising future. The history of astronautics is breathtaking. Humanity has come a long way, which was full of dizzying victories and high-profile failures. Castles in the air and extraterrestrial civilizations of dreamers and science fiction writers. Observations by ancient astronomers. Tsiolkovsky's first experiments. The conquest of technology and physics by the pioneers of cosmonautics. There is gold, silver, platinum and other valuable substances in space. A lot of attention has been drawn to the activities of private companies that involve mining on asteroids, but space miners will not have to go far to find rich resources.

Heroes who became the first, and those who gave their lives in the name of progress. All this made it possible to achieve what we can see now.

Space is complex technologies. Since its inception, astronautics has been associated with complex and interesting technology.

Space ships, international space stations, satellites and much more deserve a separate discussion. All this makes astronautics one of the most high-tech and expensive sciences today. Space is significant people. Space does not tolerate people with a weak psyche and whiners. There are no beauty standards for astronauts, but there are many other requirements that an ordinary person cannot meet.

Space is a glorious history and a promising future. Regardless of who you are, space is ready to open its treasures for you. Great stories, discoveries, breathtaking technology and wonderful people. Distant beauty and great possibilities.
