Don't know how to start but I think I will start! A world of possibilities, sounds both Grand and frightening. What can it be like? In my point of view the opportunity this is the chance. The world of possibilities is an infinite number of chances to change the world, both for the better and for the worse, which actually makes humanity throughout its existence. Numerous scientific discoveries, wars, breakthrough in medicine, natural disasters, art, cinema, all made by people.

I want to delve into history and return to the XIX century. In 1801 came the discovery of ultraviolet radiation. In those days, no one would have even thought that thanks to this discovery, today we will be able to protect our skin from sunburn, thanks to various creams and lotions from sunburn, or Vice versa to take a suntan cream, and on cold snowy days to go to the Solarium and get a nice tan.

Now in 2019, the world began to appear more and more diseases, and most diseases have become "younger", in terms of manifest at an earlier age. For example, cancer, now they say that the cure for cancer has already been created. In 1910, chemotherapy was opened, it certainly does not treat a malignant tumor, but at least helps to stop its development, but 109 years have passed. Also, medicine surprised the world, the first heart transplant from person to person, which took place on the third of December 1967. Всю эту информацию я узнал благодаря интернету, который появился в 1969 году.

This is the world of possibilities, every day there is a new opportunity, a new chance to change this world. Everything around is constantly improving and getting better, ranging from cellular communication, ending with the means of defense and protection of the country. All scientific discoveries, terrorist attacks, new knowledge in medicine, revolutionary upheavals and much more, lead to new world opportunities!
