Modern design is largely generated by the desire to satisfy the emotional hunger for something beautiful. This feature is an indicator that the consumer society is developing into a society of experience, which is more important than the inner world of a person, his individual feelings. The task of a designer in the modern world is to offer a variety of aesthetics in which everyone would find something different.

Global climate and economic changes are pushing engineers and architects to find other ways and solutions to structural, architectural and design issues.

The architectural trends of 2020 and 2021 have one thing in common: a commitment to sustainable technology development, increased life cycle, and long-life architectural elements. Society as a whole is evolving towards environmental obligations. Therefore, trends in architecture are also a social manifestation.

The use of recycled materials, self-sustaining buildings, installations, and technologies that help us show respect for the planet is becoming more common. But there are other trends in architecture, which we will discuss below.

Most of these trends will continue and develop in architecture and design for a long time. Therefore, we recommend that you carefully study each trend.
