And therefore it is not surprising that technology has progressed to such a high level that even a system such as "smart home" has already appeared. What is a «smart home»?

Smart home is a set of solutions for automating everyday activities that will save you from the routine. Here and home appliances - from robotic vacuum cleaners to appliances controlled from a smartphone - and systems that control everything that happens in the apartment. In fact, this is a story about improving the quality of life. The comfort consists of trifles, and the smart house will take all trifles on itself. If you woke up at night and went to the kitchen for a glass of water, you would not have to crawl along a dark corridor in search of a switch: the light will come on automatically. Have you ever been worried that you didn't turn off your iron or TV? Down with disturbing thoughts: it is enough to send a command to a smart outlet from your smartphone, and it will turn off the device that feeds from it.

As for me, I really would like to live in a smart house. Imagine it! This can really make life easier. For example, if you are an owl (like me) and like to sleep a little longer, instead of waking up early and making breakfast, then with the smart home system you don't need to worry about breakfast: a smart coffee machine will make fresh coffee, and a smart toaster - toasts. Therefore, you can sleep a little longer.

However, I can assume that not all people like this system, and not all would like to live in a smart house. I will explain. The first, and perhaps the most important reason: people think that it is very expensive. But, believe me, you will save much more with the "smart home" system than without it. Moreover, I can say that making this system is not very expensive, it is available to many people at a cost.

In conclusion, I will say that a smart house is a venture that fully justifies itself. In the future, I want to live in the smart house.
