Water - it seems that for a man there is nothing more ordinary than water. However, without water, this transparent liquid, life itself could not exist on Earth, and therefore our planet is called blue. Because of water. The famous French writer Antoine de Saint-Exupery wrote: "Water, thou hast no taste, no color, no odor; canst not be defined, art relished while ever mysterious. Not necessary to life, but rather life itself, thou fillest us with a gratification that exceeds the delight of the senses.

Water not only allows a person to live, it also allows us to enjoy the views of such beautiful creations of nature as waterfalls. For example, Niagara Falls is an incredibly beautiful creation for the sake of which people come from all over the world. But not only waterfalls are incredible, in every single lake, river or sea you can find something beautiful, special. Sailors associate their lives with water , and writers write poems, books and songs about it .

Rivers of the sea and oceans are also home to millions of sea creatures: from small crustaceans to huge whales and sharks. It was the world ocean that was the cradle of humanity and all life, it was there that life originated and the ocean still supports it. Therefore, we have the opportunity to cook delicious seafood dishes.

Water is really the most valuable resource that humans have. Recently, however, man has begun to forget how important it is to maintain balance and take care of nature. Therefore, water can become a formidable force. Hurricanes, tsunamis and floods are now not only because of the changeable of nature itself, but also because of human influence. Humanity has become strong enough to influence the entire planet. The pollution of the oceans with thousands of tons of debris kills marine animals, and carbon dioxide causes ice to melt and floods. Because of this, both people and animals suffer. Humanity needs to stop for a while and think about how to rectify the situation, it is necessary to preserve the balance, otherwise the water will become from our most valuable ally our worst enemy.
