With the advent of the computer work and human life has improved and facilitated. For example, with the advent of a personal computer at work, a person can perform work twice as fast, and the processes of counting to do automated. Many companies use computers to maintain their customers ' accounts. Banks use computers to store records and manage financial exchanges. Time-consuming calculations can also be performed automatically using a computer. A computer is a very useful human creation. The computer replaced the paper versions with electronic versions, the shelf life of which is much longer. People use computers to pay their bills, spend their free time watching a movie, listening to music, playing games or just chatting with friends.

But, the use of the computer has created some problems in the public space that .Various activities are easily solved by the use of computers. It reduces people's need and creates unemployment in public space, people use computers for no positive purpose. They play games and it lasts a long period of time. This causes a loss of energy and time. The younger generation is now spending more time and energy on Internet networks. People can illegally access the data stored on your personal computer, which can produce the most difficult problems for information security.

I believe that the computer saves time, effort, energy. In addition, the computer is used as a part of every sphere of life, for example, in transport companies, in business, medicine, industry or for climate assessment.

The computer will allow you to store a large amount of information, easily copy it and transfer. Now there is no need to stack thousands of documents in paper form, as it can be saved on disk and have access to it when it is needed.
