Imagine the future is always beautiful. And the future of the area in which you were born and grew up. I love my "small home", his native Hamovniki for the fact that here was born, grew up, went to school. Of course, I'm proud of the success of the district. Proud that over the past ten years it has changed for the better.

In the future, I imagine our area is even better: Sunny, green, and so, which is pleasant to live and where you feel secure and happy. Unfortunately, it has become less free space. Kiosks, shops, cafes and warehouses replaced so was pleasing to the eye nature. And I would like to have my area in the future do not lose the green zone, so it was expanding, purifying the air. Old dilapidated houses in the future will give way to a beautiful high-rise buildings with large Windows, through which will flow the sunshine. And numerous Parking lots and garages will hide in underground facilities. Through the wide streets of my neighborhood will drive cars that run on clean fuel. Roads throughout the area will be paved. This will be welcome news, especially the elderly. The construction of new medical facilities. There will be more cultural and entertainment centers where you could relax, take your free time. All people will be employed, especially the young, in those places where they live. In all the surrounding areas will be open kindergartens, schools and swimming pools, indoor soccer arenas and hockey rinks, ice palaces that children are not wasting time, not walked the streets for something to do.

The welfare of the whole of the district will provide happiness to all the people who are happy with life, my job and my family.
